

Teach A.I. To Pick Offers For You...

Introduction

If you are uncertain about which offer to promote, let me help you...

Just use the reasoning and data analysis of A.I. to look at the market and give you suggestions for profitable products.

The process is simple:

1. Grab the data from the marketplace using a free chrome extension
2. Train ChatGPT to find what we're seeking
3. Feed it the market data

Before you get started:

This guide is focused on WarriorPlus, so you'll need a free WarriorPlus.com account to proceed. **However**, this process can work with any market that gives you a table of offer information.

Getting Setup

1. Visit: <https://chromewebstore.google.com/detail/download-table-as-csv/jgeonblahchgiadgojdjilffklaihalj>

...and install to Chrome. There are equivalent extensions for most major browsers. Just search the plugin or extension stores for your preferred browser.

2. Go to <https://warriorplus.com/affiliate/offers>
3. Sort by Launch Date
4. Set Rows to Page to 100 on the left hand side
5. Right click (or CMD click on Mac) on the table of offers and select "Download Table as CSV". Save this file to a folder on your desktop.
6. Do this for 3 to 5 pages of offers to give you about 3 months of data
7. Open up a new ChatGPT instance:
8. Give ChatGPT the following training prompt:

I'm going to give you some data and I want you to analyze it for me. The data consists of affiliate offers. I need to know the best offers to promote. Offers with a higher EPC are preferred. Followed by higher conversions and sales volume. Offers with high

Offer Selection Training Prompt

refund rates over 15% are discouraged. Combine these files into a single dataset and using the given criteria, propose products i should be promoting based on favorable performance. You may need to reformat the data. You should also be aware that the sales volumes are provided as a range. 50+ means 50 to 100 sales. 500 means 500 to 1000 sales. The range is often 500 sales of uncertainty, but this is enough to gauge offer volume. Remove duplicate items. After analyzing, provide the following;

1. A summary of offer type, and nature of the offer and audience.
2. The top 5 performing products for the data set.
3. Any trends spotted as they related to common themes.
4. A prediction on future trends, if possible.
5. Finally, and most importantly, a balanced recommendation of products to promote from the dataset.

Let ChatGPT acknowledge the training, and then drop in all of the CSV files you downloaded using the extension.

After you add the files. ChatGPT will format, clean, and debug the data so analysis can be completed. This may take a few minutes. It already has instructions from the training prompt, however you can give it further directions, if need be.

ChatGPT will then give you analysis and suggest which offers to promote under the “Balanced Recommendation of Offers to Promote” section in its reply.

The next step for you would be to visit the affiliate info page for those offers on WarriorPlus and request a link to promote.
